CSCI 310: Project 2 EventMe

● ● ●

By Brian Hyeongseok Kim

Events without spending $$?

1. Discover

2. Register

Navigation

1. Explore Tab
2. Map Tab
3. Profile Tab

Profile Tab

Basic Feature

- Name, birthday, photo upload
- Existing event registrations
- Not logged in -> login/register
- Logged in -> logout

Login/Register

Basic Feature

- Launching the app for the first time
- They can use the app as guest, but in order to register for events, they must create an account

Explore

Feature #1

- Search events based on
  - Event type
  - Name of the event, organizer, etc.
  - Range of dates
- Sort events based on
  - Lowest to highest cost
  - Closest to farthest distance
  - Earliest to latest date
  - Alphabetical

Map

Feature #2

- Map of current user location with markers indicating events around them
- Should be able to switch to a list view of events and then back (think Google Maps)

Register

Feature #3

- Clicking on the "Event Box" should lead to a page with event details
- Register button
  - User not logged in
    - Must login/register
  - Logged in and not registered
    - Conflicting events?
  - Logged in and registered
    - Unregister for the event

For more details

- Please read the project description for:
  - Specific types of information
  - Minimum number of events
  - Specific ways to present the information
  - Etc.
- Any questions?
  - Email me at brian.hs.kim@usc.edu
  - OH: Fridays 2-4pm via Zoom
